

# Tactical Casualty Care Cards (Pack of 10)

The image displays two tactical casualty care cards. The top card is the front side, featuring a Glasgow Coma Scale (GCS) with scores for eye, verbal, and motor responses. It includes sections for vital signs (Pulse, Resp, SpO2, BP), mechanism of injury (Blunt, Sharp, etc.), and a color-coded priority system (Red, Yellow, Green, Blue, Black). The bottom card is the back side, showing a patient diagram with injury locations, a detailed injury description, and treatment information such as chest seal, needle decompression, and fluid administration.

 6515-01-590-7465

Quantity: Pack of 10

When you are rushing to save lives, knowing at a glance a patient's injuries and treatments can save time and lives. The H&H Combat Care Documentation Cards provides immediate access to vital life-saving information in the field.

Made of high quality paper and designed to be small enough to fit in any trauma kit, the H&H Combat Care Documentation Card is a use-once, throw away tool to communicate to everyone quickly and efficiently.

This card is everything that is needed to document care under fire. All the provider has to do is circle the care that they gave and write in the time. Has a graph to record vital signs and medications given. Has a bar code for patient identification and tracking.

Our cards come in two versions. Our Standard Version (Item No. HHTC3V1) provides bar-coding for patient identification and tracking and includes a zip tie to easily attach the card to a wrist, ankle or button hole. Our Enhanced Version (Item No. HHTC3MC) includes a complete MIST report on the back in addition to the bar code and attaches with an elastic strap.
