Weight:	66 g

This portable capnograph monitor from Idot-med is ready to measure within 5 seconds; with End-tidal CO2 value shown after the first breath and Respiratory rate value shown after the second breath, then updating every breath thereafter.

It is built with NDIR infrared mainstream technology inside and performs a functional self check each time it is powered on.

It quickly and directly connects to endotracheal tubes, face masks or laryngeal masks via the airway adapter which are designed to make connection so simple and straight forward.
