LESS Triage Pocket™ 3050 with four categories reflective bands. Part of LESS Evacuation System.

LESS Triage Pocket™ 3050 is a functional bag that attaches with a strap around the waist.

The pocket contains 10 reflective tapes of each four categories of red [IMMEDIATE], yellow [URGENT], green [DELAYED] and grey [no signs of life].

The reflective tapes are very effective and easy to use for identification of patient priority.

The system is designed for first phase triage in major accidents, and works well together with all major triage algorithms.
